2stroke Engine

A two-stroke (or two-cycle) engine is a type of internal combustion engine that completes a power cycle with two strokes (up and down movements) of the piston during only one crankshaft revolution. This is in contrast to a "four-stroke engine", which requires four strokes of the piston to complete a power

cycle during two crankshaft revolutions.

Two-stroke engine - Wikipedia

Two-stroke engines do not have valves, which simplifies their construction and lowers their weight.

Two-stroke engines fire once every revolution, while four-stroke engines fire once every other revolution. This gives two-stroke engines a significant
