In economics, a demand curve is a graph depicting the relationship between the price of a certain commodity (the y-axis) and the quantity of that commodity that is demanded at that price (the x-axis). Demand curves can be used either for the price-quantity relationship for an individual consumer (an individual demand curve), or for all consumers in a particular market (a market demand curve).

Demand curve - Wikipedia

Water Quantity Estimation. The quantity of water required for municipal uses for which the water supply scheme has to be designed requires following data: ... = $1.5 \times (1.8 \times \text{average daily demand})/24 = 2.7 \times \text{average daily demand}/24 = 2.7 \times \text{annual average hourly demand}$.
