Agricultural wastewater treatment is a farm management agenda for controlling pollution from confined animal operations and from surface runoff that may be contaminated by chemicals in fertilizer, pesticides, animal slurry, crop residues or irrigation water. Agricultural wastewater treatment is required for continuous confined animal operations like milk and egg production.

### Agricultural wastewater treatment - Wikipedia

The correct volume of spray is the sprayer application rate multiplied by the number of acres. Example You want to spray a 12-acre field and your sprayer applies 20 gallons per acre. Gallons of spray mixture = application rate (gallons per acre) × area to spray (acres) Therefore, put (20 × 12 =) 240 gallons of pesticide and carrier in the tank.
