Transfer RNA (tRNA) is a small RNA chain of about 80 nucleotides that transfers a specific amino acid to a growing polypeptide chain at the ribosomal site of protein synthesis during translation. It has sites for amino acid attachment and an anticodon region for codon recognition that binds to a specific sequence on the messenger RNA chain ...

In #13307 we combined multiple KVStore types (TDBStore, FileSystemStore) and the global API into one library, kv-global-api. This is inconvenient for users of bare metal: if they only want one store type, they need to add dependencies for other unused types and the global API to "requires". This becomes cumbersome as FileSystem has many ...
