The idea is that the next stage (for example, Deploy_to_UAT) will operate with the same variable names defined in its own UAT-scoped variable group. Deploy an Azure Data Factory pipeline. A deployable artifact for Azure Data Factory is an Azure Resource Manager template.

DevOps for a data ingestion pipeline - Azure Machine Learning

{quote} There are 2 kind of "AI": 1. Give some input to AI, train it (optimize), then run in real life - and here works concept "bet against it" 2. Implement that AI re-trains itself (self-learning) - here no idea how it would work, I have no resources to implement that kind of AI Real AI is maybe 2nd.
