Transmission Line Design Handbook

In electrical engineering, a transmission line is a specialized cable or other structure designed to conduct electromagnetic waves in a contained manner. The term applies when the conductors are long enough that the wave nature of the transmission must be taken into account. This applies especially to radio-frequency engineering because the short wavelengths mean that wave phenomena arise over ...

Electric power transmission is the bulk movement of electrical energy from a generating site, such as a power plant, to an electrical substation.The interconnected lines which facilitate this movement are known as a transmission network.This is distinct from the local wiring between high-voltage substations and customers, which is typically referred to as electric power distribution.

The order of magnitude of the efficiency for a transmission using two axial piston machines is given as a function of the transmission ratio in Figure 6.5 By using a variable displacement machine, a 4:1 variation of the transmission ratio can be obtained. If both machines are of the variable displacement type, a 10:1 variation is obtainable with good efficiency.
